

U-trash Ecological Islands - Assembly Instructions

Three Baskets Island - Front line Version

1) Place the three pillars of engagement of the containers to the vertical wall of the structure by matching the holes of the posts with the holes in the wall.

The uprights are positioned with the concave side against the wall of the structure.

Need four screws for each upright, three long and one short, the short screw is the topmost one of the four and is inserted into the threaded higher than the basket while, that long Through the bottom for fastening the mast to the structure must be locked with the nut and the washer.

2) After the three vertically positioned uprights, to secure the three baskets to each of the uprights using two long screws and one short which is the topmost one.

3) The insertion of the screws from the back of the structure, results in blockage of the three pillars and the engagement of the baskets.

4) The structure is equipped with holes for fixing to the floor or to insert the castors to be able to move comfortably.

Three baskets Island - Star Version

1) Attach the pole-pillar to the base with the bolt supplied then, support structure to the floor with the pole mounted and secure the three brackets with the side vents to the pole with the supplied screws so, screw the other half brackets against the baskets with short screws endowment and join together using the six bolts fitted with locking nut.

Two brackets for star version
